

# PURE HELIUM RECOVERY AND PURIFICATION SYSTEM

## WHY SHOULD YOU CHOOSE PURE?

01

### PURIFIES

PURE can accept helium mixed in air/nitrogen as low as 5% and purify it to your required machine input pressure and concentration up to 90-99% at 50 bar or less

### CONVENIENT

PURE does not require the pre-evacuation levels of the machine to be changed, so there's no need to drastically change cycle times

02

03

### VERSATILE

The PURE System works with all HeLTs, and can be retrofitted onto older machines

### EASY INSTALLATION

Setup is quick and easy - with no need to shut down production

04

05

### COST EFFICIENT

The PURE System can be easily transferred between lines to maximise savings
