

LEAK TESTED VS NON-TESTED

WITHOUT FINAL LEAK TEST

Leaking battery cells can result in:

Reduced battery pack efficiency

Having to replace faulty battery packs – costing you money and reputation

One leaking cell can cause other cells to overheat and leak, worsening these problems

If battery cell fluid leaks within the battery compartment, it can become unusable and destroyed, leading to harmful substances being released

Leaked electrolyte combining with air or water, producing dangerous hydrofluoric acid

WITH FINAL LEAK TEST

VES' Final Leak Test is the **ONLY** way to ensure your battery cells are **100% Leak Free**
